

Tyrotec Portal

How the system works, and how to run it day to day

This guide explains the Tyrotec online ordering portal in plain language. The first part covers what your customers see and do. The second part covers what your team does. Nothing here assumes any technical knowledge.

In one sentence

Customers build a quote from your catalogue, accept it to create an order, pay by card or EFT, and collect their parts - and your team sees every step of it as it happens.

The journey, end to end

The customer does all of this themselves.

Your team only steps in to confirm an offline payment, or when stock runs short.

WHAT'S INSIDE	PAGE
Part 1 - For your customers Signing up, finding parts, quotes, orders, paying, receipts	2
Part 2 - For your team Products, quotes, orders, payments, customers, staff, reports	4
Part 3 - Reference Order stages, VAT, the 60-minute hold, who to call	6

Part 1 — For your customers

Customers use the portal themselves, on a phone or a computer. They do not need any training and they do not need to phone you to place an order.

Getting an account

Anyone can create their own account at your portal address. They enter their company name, email and a password — or they can simply sign in with their Google account. New customers can start browsing and ordering immediately.

Finding parts

- 1 **Browse or search.** The full catalogue is available, with a photo, description and price for every part.
- 2 **Filter by category.** Parts are grouped into categories so a customer can narrow down quickly.
- 3 **Check availability.** Each part shows whether it is in stock before anything is added.
- 4 **Add to the quote.** They choose a quantity and add it. They can keep adding parts as they go.

Getting a quote

When the customer is happy with their list, they press **Request quote**. The portal creates a formal, numbered quotation showing every line, the price excluding VAT, the VAT, and the total. They can download it as a PDF to send to their buyer or finance department.

Why quotes come first

Every order in the system starts life as a quote. That gives your customer something formal to approve internally, and gives you a permanent record of exactly what was priced and when.

Turning a quote into an order

When the customer is ready to buy, they open the quote and press **Accept & order**. The portal immediately sets that stock aside for them so nobody else can buy it, and creates a numbered order.

The 60-minute hold

Stock is held for 60 minutes while the customer pays. If payment does not arrive in that time, the hold is released, the stock goes back on the shelf and the order is cancelled — but the quote becomes available again, so the customer can simply accept it a second time.

Paying

There are three ways money can reach you, and all three end up in the same place:

Card and Instant EFT happen online through PayFast. The customer presses **Pay now**, completes the payment, and the order marks itself as paid straight away. Nobody on your team has to do anything.

Invoice is for approved account customers only. They press **Pay on invoice**, the stock stays reserved for them with no time limit, and you record the payment once it reflects in your bank account. You decide, customer by customer, who is allowed this.

Receipts and updates

As soon as an order is paid, the customer can download a receipt showing what they paid, how and when. They are notified in the portal, and by email, each time their order moves forward — approved, paid, ready for collection.

Ordering by WhatsApp

Customers who prefer WhatsApp can message your business number to browse the catalogue, build a quote, turn it into an order and check on past orders. It is the same system underneath, so anything done on WhatsApp appears in the portal too.

Part 2 — For your team

Your staff sign in at the same address and see an admin view instead of the shop. What each person can do depends on the role you give them.

Each level can do everything the level below it can, plus more

Super admin

Everything, including staff and the activity log

Admin

Everything except managing other admins

Sales rep

Products, quotes, orders, customers

The daily rhythm

Most days there is very little to do. Orders paid by card or EFT look after themselves. Your team only needs to act in three situations:

- 1 **Money arrived in the bank.** Open the order and press **Record payment**.
- 2 **An order is packed.** Press **Mark ready for collection**, and the customer is notified.
- 3 **The customer collected it.** Press **Mark collected**. That closes the order.

Orders

The Orders screen lists everything, newest first. You can search by order number, customer or email, and filter by stage. Opening an order shows the parts, the totals and the buttons for whatever that order needs next — and nothing else, so there is no guessing.

Recording a payment

Only record a payment you have already seen in the bank. Choose how it was paid, enter the reference, and confirm. The order is marked paid immediately and the customer gets their receipt — there is no second approval step.

Products

- 1 **Add or edit a part.** Name, code, description, price excluding VAT, stock on hand, category and a photo.
- 2 **Manage categories.** Add your own categories at any time; they appear as filters for customers straight away.
- 3 **Bulk import.** Upload a supplier list and the system reads it for you, matching parts to your categories.
- 4 **Export.** Download the whole catalogue to Excel whenever you need it.

Quotes

You can build a quote on a customer's behalf — useful when someone phones in. Choose the customer, add the parts, and the quote appears in their portal account. From there you can email it to them with the PDF attached, or download it yourself.

Customers

Every customer has a page showing what they have spent, their orders and their quotes. This is also where you allow a customer to **order on account** — that is a credit decision, so the system asks you to confirm it and records who made the change.

The review queue

The portal flags orders worth a second look. Flags do not stop an order — they just tell you:

FLAG	WHAT IT MEANS	WHAT TO DO
High value	The order is over your set threshold	Check it looks right
First-time customer	This is their first completed order	Confirm the details
Not enough stock	You cannot fill the order right now	Approve once you can supply, or cancel it

Staff

Staff cannot sign themselves up. An admin sends an invitation to their email address, and that link lets them set their own password. You can change someone's role, suspend them, or remove them at any time.

Activity log

Admins can see a record of what has happened: sign-ins and failed sign-in attempts, price and stock changes, payments recorded, staff added or suspended, and files exported. It is split into customer activity and staff activity so you can look at one without the other.

Reports

Products, quotes and orders can all be exported to Excel, for any date range you choose. Quote and order exports include a second sheet listing every line item, so the figures can be handed straight to your bookkeeper.

Part 3 — Reference

What each order stage means

STAGE	MEANING	WHO MOVES IT ON
Awaiting approval	Not enough stock to fill the order yet	Your team
Awaiting payment	Stock is set aside, waiting for money	The customer, or your team
Paid	Money received; ready to be picked and packed	Your team
Ready for collection	Packed and waiting for the customer	Your team
Completed	Collected. The order is closed	—
Cancelled	Called off; stock has gone back on the shelf	—

VAT

Every price in the portal is shown **excluding VAT**, with VAT added as a separate line. Quotes, orders, receipts and the Excel exports all show the amount before VAT, the VAT, and the total, so the figures match what your accounting system expects.

Stock

Stock is reduced the moment an order is created, not when it is collected — that is what stops two customers buying the same last item. If an order is cancelled, or a 60-minute hold expires, the stock goes straight back on the shelf automatically.

Common questions

QUESTION	ANSWER
A customer says they paid but the order still says awaiting payment.	Card and EFT payments confirm within a minute or two. If it has been longer, check your bank and use Record payment .
Can I change a price after a quote has been sent?	Changing a product's price does not change quotes already issued. Those keep the price that was quoted.
A customer wants to order but has no card.	Either record their EFT once it reflects, or enable ordering on account for them.
Can two people use the same login?	They can, but the activity log will show both as the same person. Give each staff member their own invitation.
What happens if we run out of stock mid-order?	The order is created but held for your approval, and your team decides whether to supply or cancel.

Support

The portal is built and maintained by Quantilytix. For anything that looks wrong, or for changes you would like made, contact your Quantilytix representative.
